

ABOUT .BANK

What is .Bank?

.Bank is a secure domain exclusively for verified banks, replacing historical domains. It ensures authentic communication via bank email addresses and website URLs, providing confidence, trust and security.

Why is .Bank more secure?

.Bank verifies all banks and mandates and monitors for compliance with the Security Requirements. The .Bank cue adds visual authentication, enhancing protection against the most common cyberattacks (e.g., phishing, domain spoofing) that can lead to identity theft, business email compromise, and fraud.

Why haven't all banks switched to .Bank?

The switch to .Bank is a business decision each bank makes based on priorities and resources.
